

## Session 2

### Tasks:

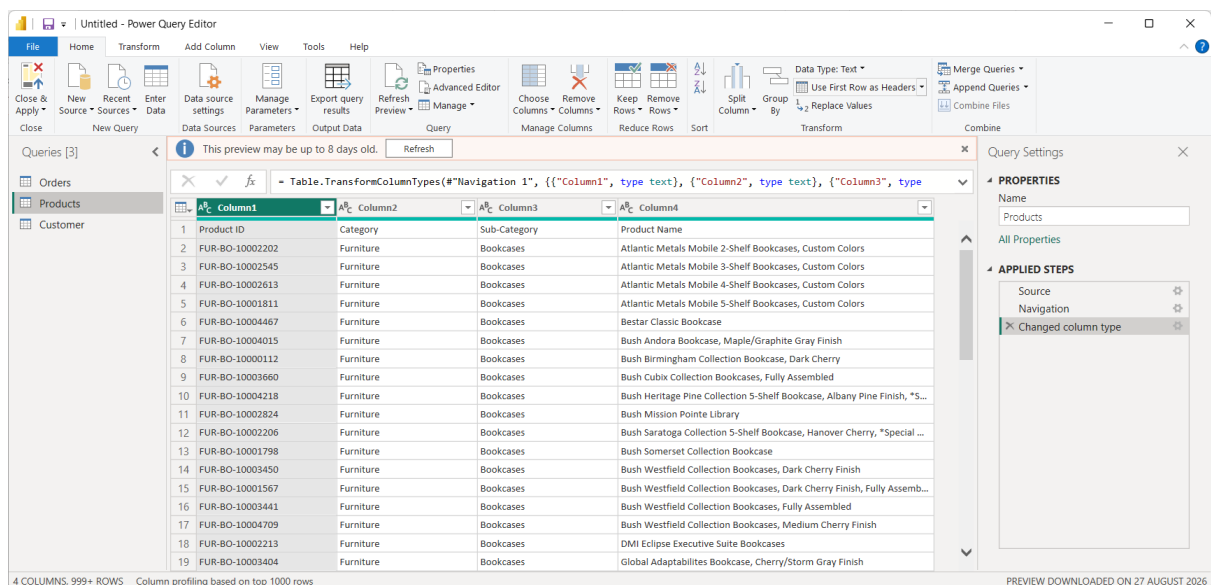

1. Open Power BI Desktop, load the provided 'Sample Data' Excel file, and switch between Report View, Data View, and Model View to observe how the data is displayed differently in each.

Ans:

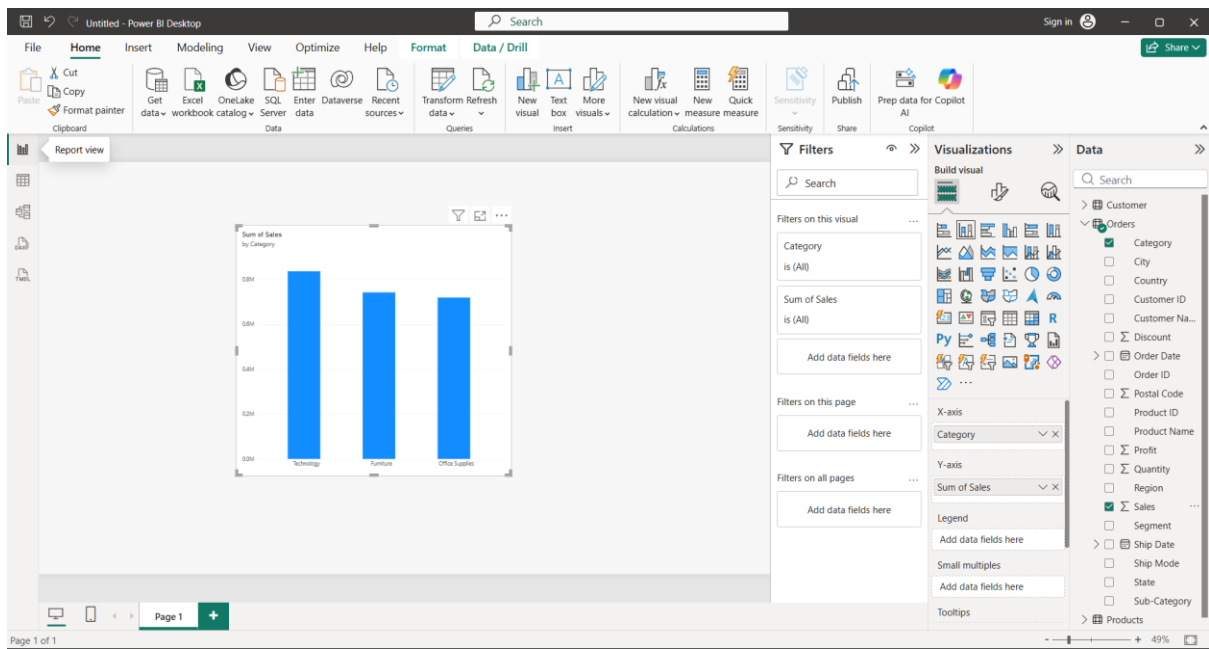

Loading the data through Excel File and then Transform data for data cleaning

Now cleaning the data by Power Query Editor

You can clearly see, this is report view:

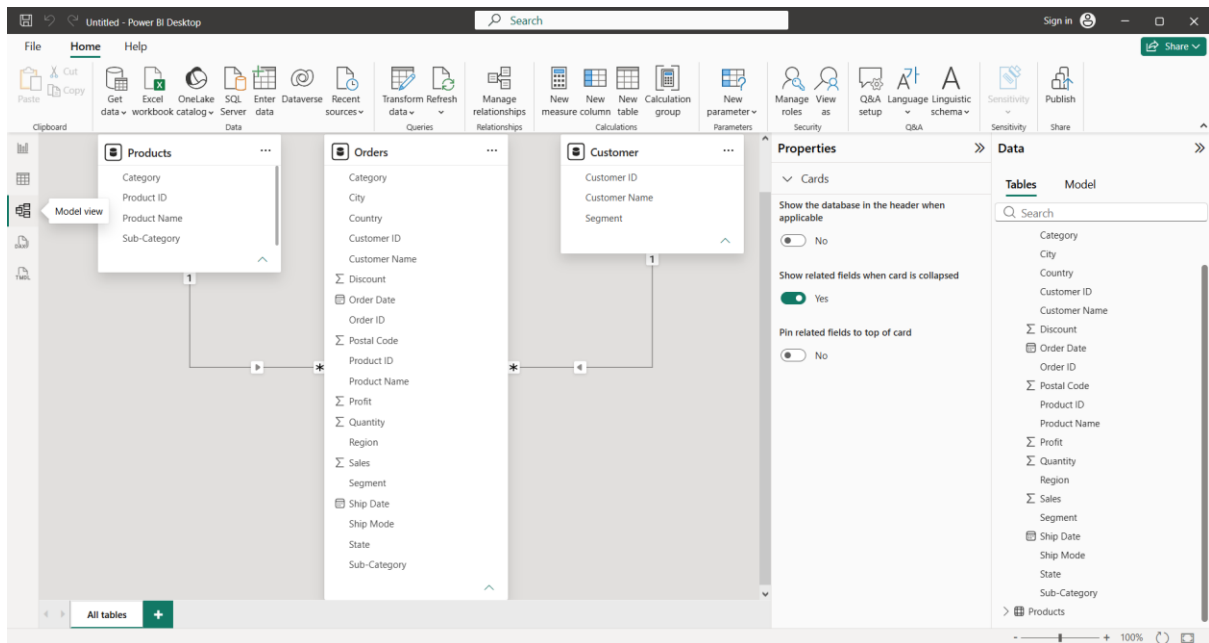

This is table view:

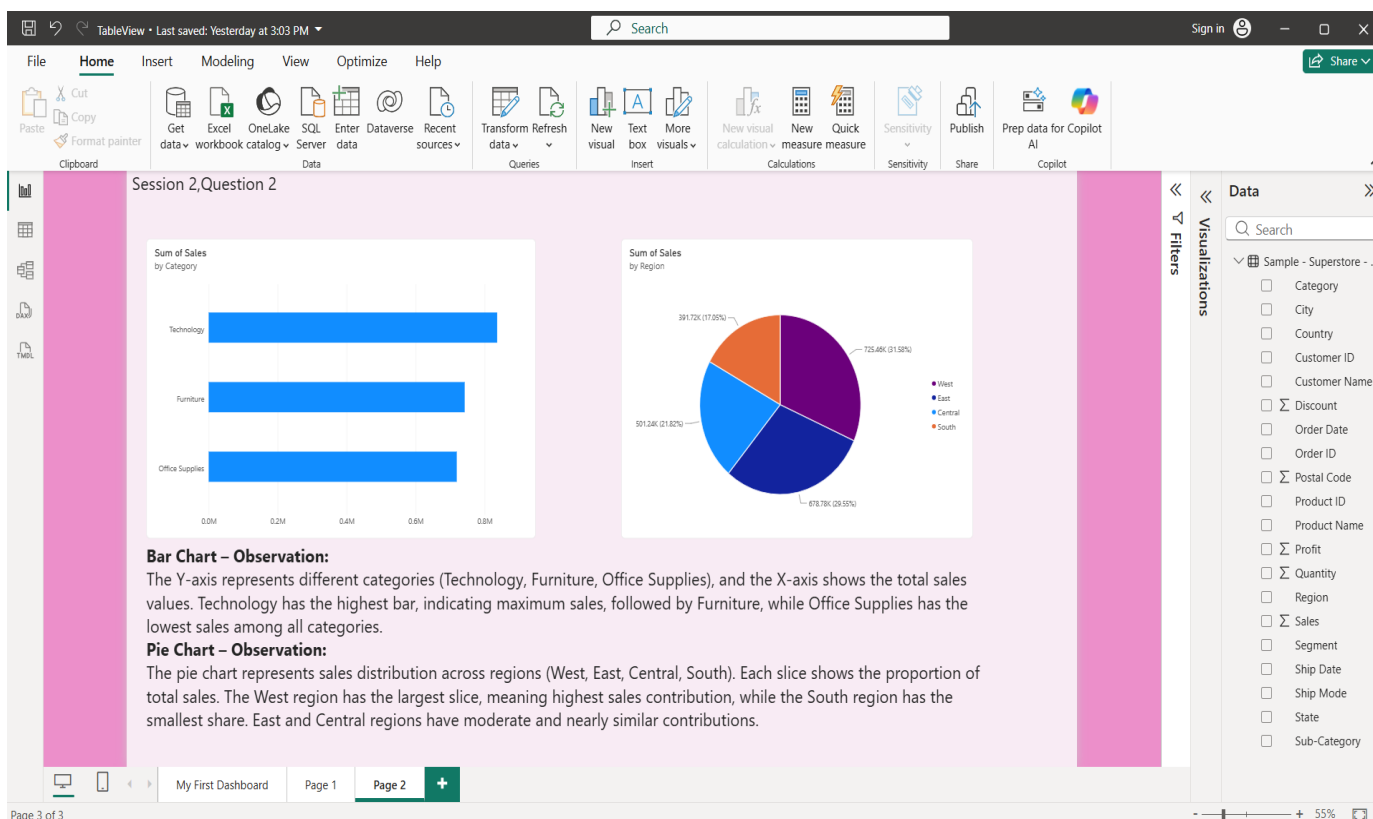

Table: Customer (793 rows)

| Customer Name      | Segment  |
|--------------------|----------|
| Claire Gute        | Consumer |
| Sean O'Donnell     | Consumer |
| Brosina Hoffman    | Consumer |
| Andrew Allen       | Consumer |
| Irene Maddox       | Consumer |
| Pete Kriz          | Consumer |
| Alejandro Grove    | Consumer |
| Zuschuss Donatelli | Consumer |
| Sandra Flanagan    | Consumer |
| Emily Burns        | Consumer |
| Eric Hoffmann      | Consumer |
| Tracy Blumstein    | Consumer |
| Patrick O'Donnell  | Consumer |
| Lena Hernandez     | Consumer |
| Darren Powers      | Consumer |
| Ted Butterfield    | Consumer |
| Kunst Miller       | Consumer |
| Karen Daniels      | Consumer |
| Henry MacAllister  | Consumer |
| Joel Eaton         | Consumer |
| Duane Noonan       | Consumer |
| Paul Gonzalez      | Consumer |
| Karl Braun         | Consumer |
| Katherine Ducich   | Consumer |
| Gary Zandusky      | Consumer |
| Lena Cacioppo      | Consumer |
| Janet Martin       | Consumer |

This is model view:

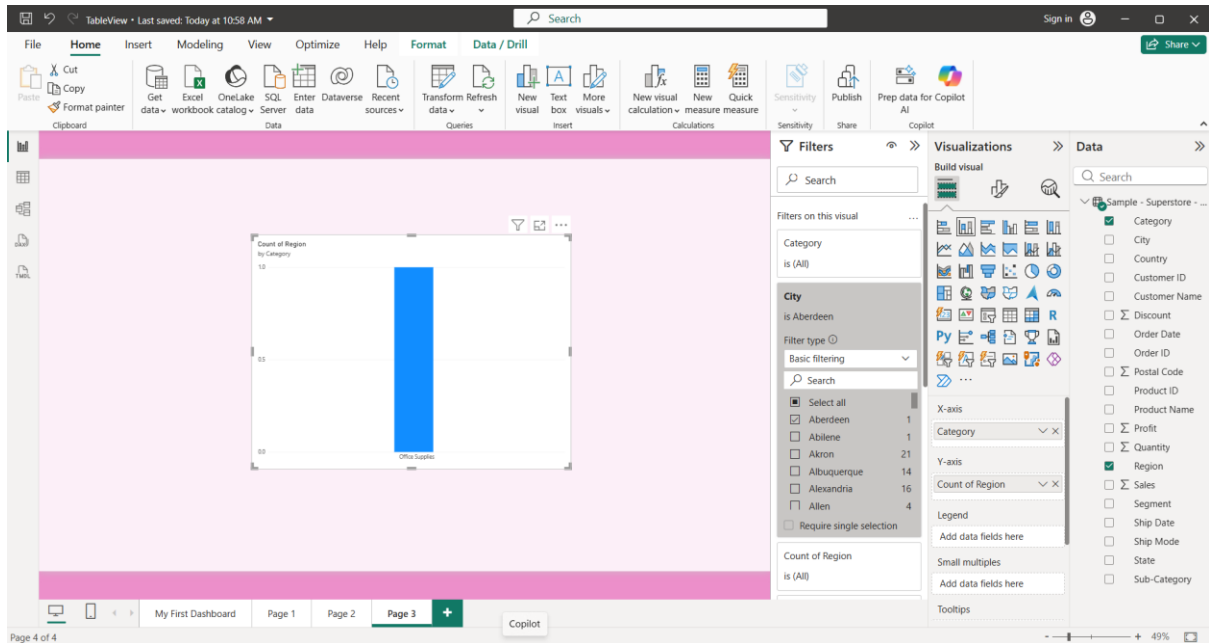

2. In the Report View, use the Fields Pane to drag any two different fields onto the canvas and create two separate visualizations (for example, a bar chart and a pie chart).  
Ans: Fields Pane and Data Pane are same

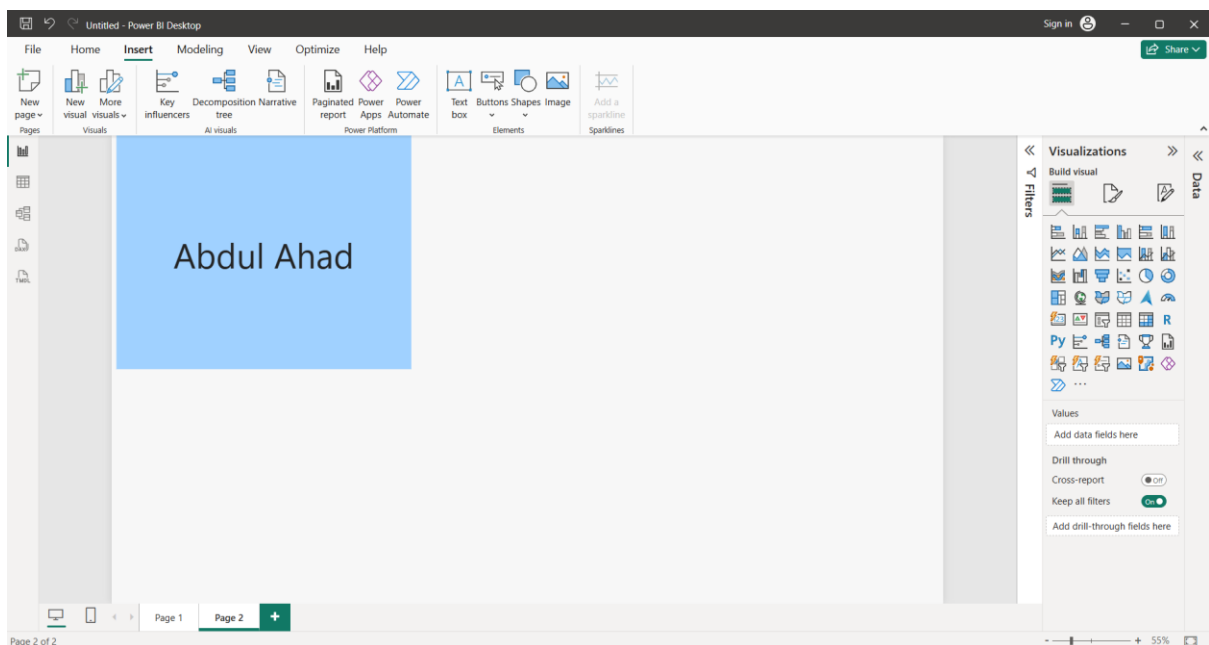

3. Use the Filters Pane in Report View to add a filter that only shows data for a specific value (for example, filter to display sales data for one city or category only).

Ans:

4. Explore the Ribbon commands under the Home and Insert tabs: add a new page to your report, and then insert a text box with your name on it.

Ans:

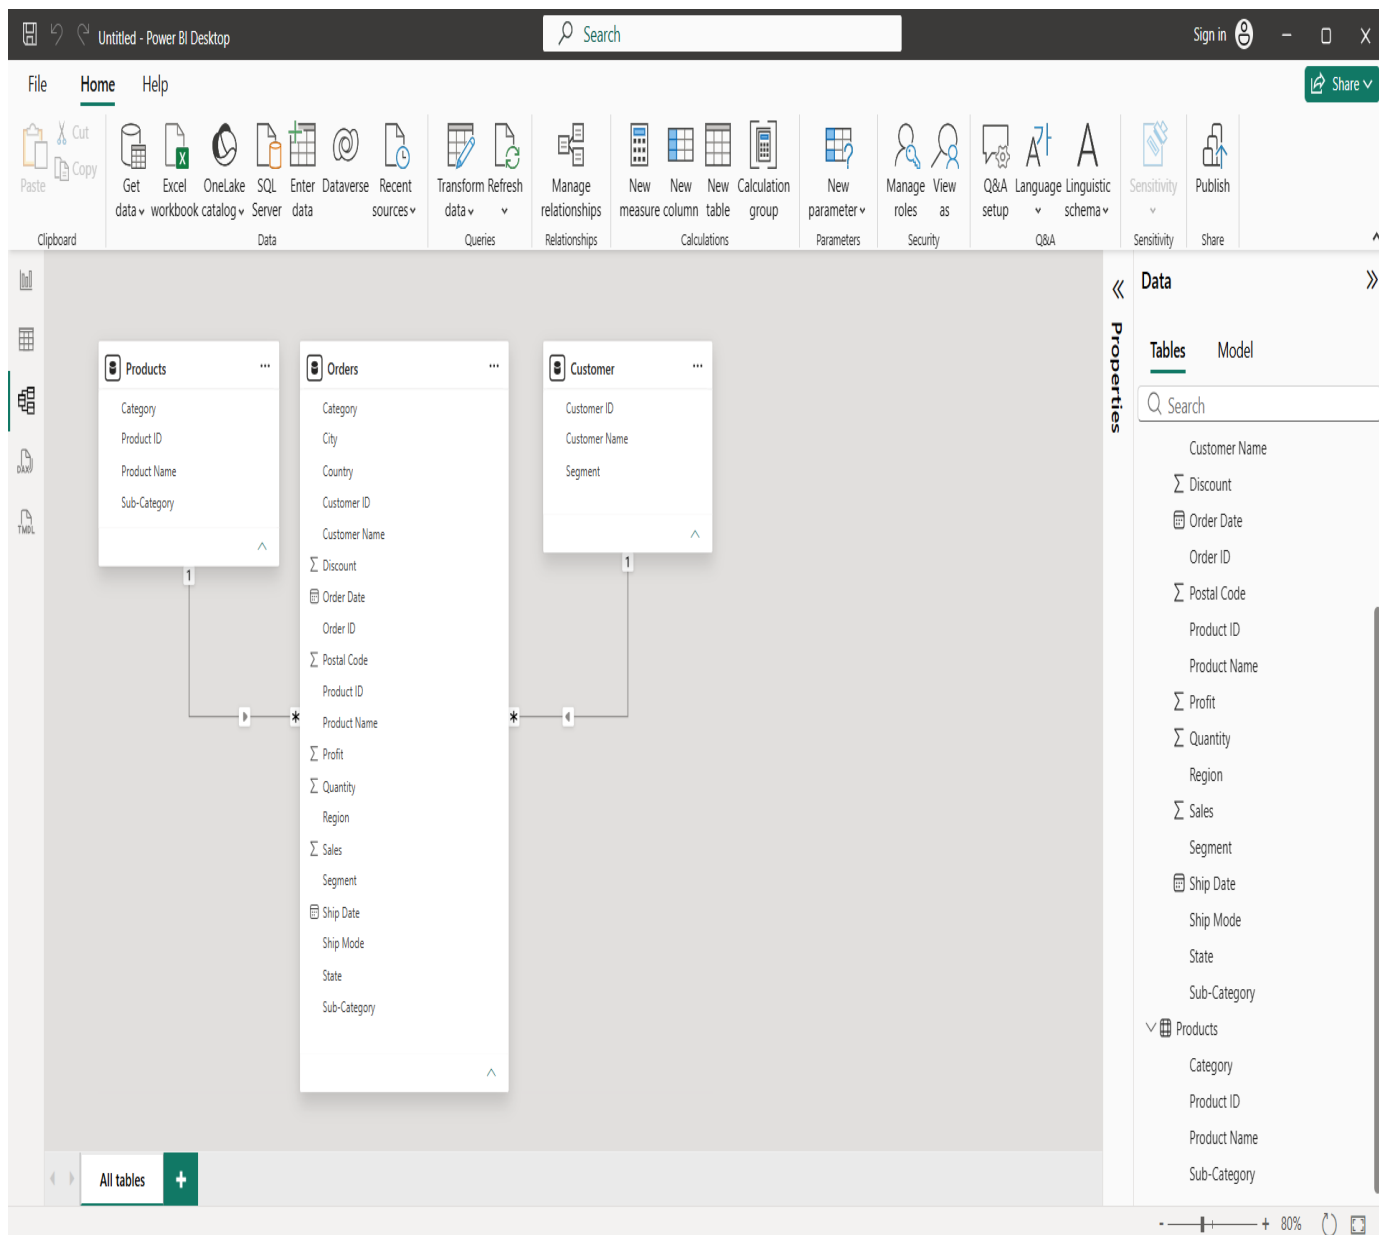

5. Switch to the Model View and use the Visualizations Pane to check relationships between tables; then, rename one field in the Fields Pane to make it more readable (for example, change 'Cust\_ID' to 'Customer ID').  
**Hint:** Right-click the field name to rename it directly in the Fields Pane.

Ans: I saw model view and checked relationships

→ Products and Orders connected by product id

→ Customer and Orders connected by customer id

I changed Customer Name to Customer\_Name in fields/data pane
